BERNABÉU STADIUM
MADRID, SPAIN**

**AIR2G2
324**

**A SPORTS FIELD
FIT FOR ROYALTY**

**THE AIR2G2 324
AT REAL MADRID**

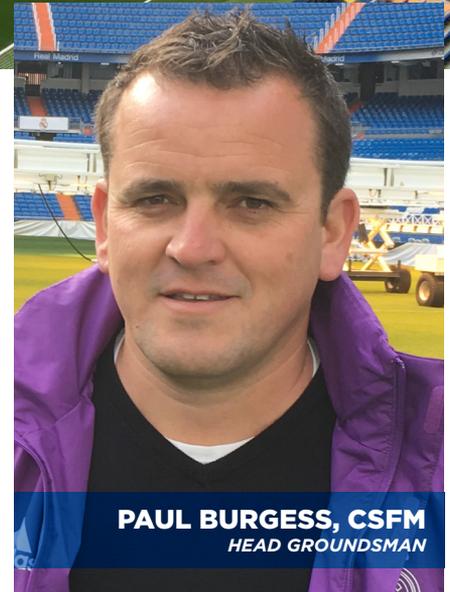

Paul Burgess, CSFM, has served for nearly nine years as the Head Groundsman for Spain's legendary Real Madrid CF at Santiago Bernabéu Stadium and its 14 training pitches. Named the "Most Influential Figure in the Turf Care Industry" by Turf Business magazine, Burgess was the first in Europe to earn a Certified Sports Field Manager certification as well as the first European turf manager to be awarded an STMA Environmental Certification.

It's no wonder that he was the very first turf professional in Europe to purchase an Air2G2 324. Burgess first heard about the Air2G2 324 at the 2013 STMA Show in Daytona Beach, Florida. After watching a demonstration by Glen Black, inventor of the Air2G2 324 and founder of GT AirInject Inc., Burgess was impressed by the technology and purchased the Air2G2 324 through his European distributor, Campey Turf Care Systems.

"The idea didn't take any selling. I got the idea straight away," Burgess said. "It's a brilliant machine, it does exactly what it says it does."

The Air2G2 324 relieves **Compaction**, increases **Porosity** and enhances **Respiration** by laterally injecting air into the soil profile with minimal surface disruption and without damaging the roots below.

"Our root development is much better. We don't have any big issues with layering, black layer or anaerobic layers. We get sod to root down quicker. We have deeper roots. There's more nutrients available to the plant to grow a healthier sword of grass," Burgess said. "It's the cleanest, most effective way of aerating the surface. It's pure aeration. It's brilliant."

PAUL BURGESS, CSFM
HEAD GROUNDSMAN
